

What is AdaptAlert

The **AdaptAlert** Enables the wireless connection of non-wireless detection devices (such as beams, trip wires, or smoke detectors) supplied by third parties to become wirelessly compatible with WirelessAlert products. **AdaptAlert** consists of a miniature transmitter Module (m-TX) that allows for adapting a wide range of '3rd party' wired devices to function as Wireless devices, capable of triggering zones on **VoiceAlert**, **MaxAlert**, and **TextAlert II**. So **AdaptAlert** provides the radio 'bridge' that takes the place of wiring.

AdaptAlert mini transmitter R

AdaptAlert is compatible with the **VoiceAlert**, **MaxAlert** or **TextAlert II** base receivers.

For more detailed technical information please visit www.wirelessalert.co.za

How Does It Work

The **AdpatAlert** module is mounted onto (or if possible inside) a third party device. It is physically connected via short wires, to the output electronics of these devices. The **AdaptAlert** is activated by bridging or breaking contact between the existing unit's IN / IN Terminals depending on chosen mode of operation. Once activated the **AdaptAlert's** Transmitter sends a zone-specific (wireless)radio signal to the **WirelessAlert** base units.

EXAMPLE: AdaptAlert connected to Door/Window magnetic contact

The **AdaptAlert** in the diagram above is connected to a magnetic Door or Window contact. The unit is set for Normal operation and will trigger and transmit through to a **WirelessAlert** base receiver when the magnetic door contact is moved.

BETRAYING CRIMINALS

Who Needs It and Why?

Easily retrofit any existing systems or detectors with **AdaptAlert**, and 'adapt' it to powerful new **WirelessAlert** applications

AT HOME

Use the **AdaptAlert** to convert your existing house alarm sensors and garden beams for Wireless operation.

AT WORK

Use the **AdaptAlert** to monitor switching of sensitive equipment like computer servers and machinery – by sending messages to your cell phone
Monitor illegal access to sensitive areas by using **AdaptAlert** and magnetic door contacts to activate **VoiceAlert**, **MaxAlert** or **TextAlertII**.

HOLIDAY HOME

AdaptAlert converts sensors to wireless with **WirelessAlert** base units which means that you will know exactly what's going on at your holiday home even when you're miles away

GOLF & SECURITY ESTATES

Use **AdaptAlert** to reduce the amount of wiring required for security on large properties
